

IN THE SPECIFICATION:

Please amend the paragraph beginning at page 5, line 23 as follows:

The term shoe or leather care product when used in the context of the present invention is intended to encompass any type of shoe or leather care product, including pastes, creams, liquid polishes, self shining polishes in liquid or cream format, silicone sponges, aerosols for protecting, conditioning, shining and cleaning smooth leather, cleaners in liquid or aerosol form, and suede and nubuck care products for protecting conditioning and cleaning. Preferably, the shoe care product is a shoe polish or a shoe cream. Most preferably, the the show care product is a shoe polish, a shoe cream, a self polishing composition, an impregnated towel or sponge or an aerosol. Shoe polishes and shoe creams are especially formulated to shine, nourish, protect clean, condition, colour, refresh and waterproof smooth leather while essentially preserving the original look and nature of the leather article and increasing the shine of the leather. Usually shoe polishes are packed in tins from metal or plastic while shoe creams are offered in glass or plastic jars, plastic or aluminium tubes with or without sponge applicator or in sachets. It is to be noted that if a shoe care product is to be packaged into a metal container, such as a tin, it is preferably free of chloride ions, in particular of sodium chloride, to avoid corrosion.
